

Contemporary Assessment of Neurodevelopmental Conditions Across the Lifespan: A Focus on FASD, Autism, ADHD and Commonly Co-occurring Conditions

Wellbeing in Mind Psychological Services is pleased to present an intensive two-day training in Auckland focused on the theory and clinical practice of assessing and treating neurodevelopmental conditions, including Autism Spectrum Disorder, Foetal Alcohol Spectrum Disorder (FASD), and Attention-Deficit/Hyperactivity Disorder (ADHD). This training is designed for psychologists, paediatricians, psychiatrists, and allied health professionals working with neurodivergent children and adults. Participants may choose to attend both days or register for individual days, depending on their clinical interests and learning needs.

22nd - 23rd October 2026

Waipuna Hotel & Conference
Centre
Auckland

Fees

Early Bird Registration

(Closes 30 June)

1 Day | NZD 350

Both Days | NZD 600

Standard Registration

Day 1: The Impact of Prenatal Alcohol Exposure Across the Lifespan

Contemporary approaches to assessing and diagnosing FASD across the lifespan, including current diagnostic frameworks, practical assessment adaptations, and best-practice intervention planning.

Day 2: The Neuropsychology of Neurodiversity

A lifespan perspective on autism, exploring complex and less visible presentations, cognitive profiles in autism and ADHD, and neuro-affirming approaches to assessment and reporting.
